Centralised Lone Worker

Protect your workforce and your business

Employers have a duty of care to protect their workers. Having a lone worker solution is not only morally right, it makes good business sense. The potential damage to reputation added to the cost of the fine, signifies H&S failures are now major business risks.

Fines from the HSE.

New guidelines introduced in February 2016 saw the introduction of tougher penalties, the size of the fine based on a company's turnover, increasing by 74% in 2016/17, to over £61 million.

Centralised lone worker with full reporting

As businesses become more automated and staff increasingly work alone, there is a growing need to safeguard them.

InteraX lone worker periodically sends an 'alive check' to those in lone worker mode. If a user gets into difficulty and there is no response, an alarm is raised to other radio users or by SMS.

Centralised lone worker ensures everybody is looking after everybody. An unresponsive lone worker message alert can automatically be sent to all users or defined group, quickening the response time and reducing the reliance on a sole monitor.

Full reporting

Providing the essential documentation to improve lone worker activity, ensure safety and reduce culpability. All lone worker activity is recorded, whom, when and how lone worker had been activated.

No display, no problem

Non-display or use as alternative to the beeps and whistles. Lone worker messages can be relayed in real-time via a humanistic artificial intelligence, converting the alert outputs into voice notifications. Giving you the freedom to choose the radio that suits your needs.

Pre-determined lone worker

InteraX will automatically activate handsets into lone worker mode at pre-determined key risk periods i.e. evenings or weekends.

Secure lone worker

Control have the option to place workers into secure lone worker. Users cannot take themselves out of secure lone worker, only disabled by the control room. Control have full visibility of handsets that are on and off.

Three stage escalation

Tailor the response to exactly suit your needs. Inform few, many or all; by SMS or radio, in the order you choose on-site and off-site.

Emergency alert

Connecting to the radio panic button and notifying all in the case of an emergency.

PTT reset

Press the push-to-talk button on your handset and the lone worker countdown timer is automatically reset.
